Looking for a file synchronization app for your iPad, iPhone, or Mac that won't break the bank? MAIA Sync is the perfect solution. It can be a regular task to have to move files between folders, and even though this operation doesn't require a lot of effort, it can be slightly frustrating, especially if you don't want to copy all file types. Luckily, you can rely on specialized applications like MAIA Sync to only copy files according to custom filters. Straightforward synchronization between two folders Since the core function of the application isn't to look pretty, you don't find any elements to make it stand out from the crowd. On the other hand, it's pretty well-organized, and makes it easy for both beginners and experienced individuals to get the hang of things, even though there is no documentation. As the name suggests, the application helps you synchronize files, and this is done between two folders. You can't drop them over the target fields, but it's easy enough to use the built-in browse dialogs. Subfolders are not included in the process, and there's no option to do so, which is slightly disappointing. No option to create and save sync profiles In terms of files, the application comes with several predefined file filters you easily select from a drop-down menu. Note, however, that you can only apply one filter per operation, while it's also possible to have all files synchronized, regardless of format, or even include filters which aren't on the list. The process itself doesn't take a lot of time, and a dedicated section lets you know how many files got copied. When not used directly, it can quietly reside in the tray area. Unfortunately, there's no possibility to create a schedule, so all operations need to be created from scratch. A few last words In conclusion, MAIA Sync is a pretty straightforward file synchronization tool. Simple filters can be applied based on file formats, and without the possibility to create a schedule, overall practicality has to suffer. It can, however, help you easily transfer files to external storage devices. What's New in the MAIA Sync?

MAIA Sync is an easy-to-use and fast file synchronization application, capable of not only synchronizing files between multiple folders, but between a range of devices as well. Sync files with custom filters and different folder structures As with many similar programs, MAIA Sync is rather simple and straightforward. After starting the program, it's time to create a profile which will be used to define what files can be synchronized with the support of custom filters. Once that's done, the application can quietly be synchronized from anywhere, and it's possible to move files manually to the right folder. Create custom sync profiles Because MAIA Sync doesn't include a read-only mode, you're able to select what will be synchronized, and if it's a single folder or an entire drive. On the other hand, you can select files according to one or more custom filters, for example, JPG or MP3 files. Set your own schedule Being a very simple app, MAIA Sync needs no manual configuration options, and unlike many similar applications, it doesn't allow you to have your synchronization built on a schedule. By default, the synchronization is performed with a low priority, and it can be changed using the tray icon. Transfer files between different folders MAIA Sync doesn't require a lot of technical know-how to perform file synchronization. In the dedicated application, you can easily select files based on custom filters. On the other hand, it's possible to synchronize files between two different folders. Practicality MAIA Sync is relatively basic, and its most valuable features are a simple synchronization process and a straightforward interface. On the other hand, a scheduler is missing, and you can't create or save your own settings. The application can quickly be synchronized from anywhere, and it's possible to move files manually to the target folder, but you can only select from a range of folders.
