The present invention relates to a thin-film magnetic head for use as a recording head and a reproducing head in a magnetic recording and/or reproducing apparatus and a method for manufacturing the same. The basic construction of a thin-film magnetic head is schematically illustrated in FIG. 6. As is shown, a slider 51 made of a ceramic or a titanium material is bonded onto a substrate 52 made of an aluminum alloy or an other material by means of an adhesive material 53. A structure is provided between the substrate 52 and the slider 51, including a magnetic pole layer 54 which is made of an amorphous magnetic metal alloy such as amorphous Fe-Ni and its protective layers, and a coil 55 wound around the magnetic pole layer. In such a construction, the magnetic pole layer 54 is constituted by a Cr/Fe-Ni film 57 stacked on an underlayer 56 composed of, for example, $\text{Al}_2\text{O}_3 \cdot 2\text{x}80\text{x}94\text{SiO}_2 \cdot 2\text{x}80\text{x}94\text{TiO}_2$. In the case of this kind of thin-film magnetic head, the surface of the Cr/Fe-Ni film 57 is rough because of the presence of voids (vacancies) which are created in the film. As a result, the protective film of Cr and Fe-Ni is insufficient at its surface for the purpose of corrosion resistance. Thus, the corrosion rate of the magnetic pole layer becomes high, with the result that the lifetime of the thin-film magnetic head is shortened. To avoid this problem, it is necessary that the surface of the Cr/Fe-Ni film 57 is made to be flat. For this purpose, an underlayer 56 is provided beneath the magnetic pole layer 57. The underlayer 56 is composed of $\text{Al}_2\text{O}_3 \cdot 2\text{x}80\text{x}94\text{SiO}_2 \cdot 2\text{x}80\text{x}94\text{TiO}_2$ or $\text{Al}_2\text{O}_3 \cdot 2\text{x}80\text{x}94\text{SiO}_2 \cdot 2\text{x}80\text{x}94\text{TiC}$. This type of magnetic head also includes, as magnetic coil, a conductor wire wound on a portion of the magnetic pole layer formed around the gap between the magnetic pole layers and exposed therefrom. The winding configuration of the conductor wire is such that a constant spacing is maintained between the conductive wire and the magnetic pole layer. In order to give a good recording waveform and a good reproducing output, it is necessary to thin the thickness of the magnetic pole layer in the vicinity of the air bearing surface thereof. As described

Today on today's show, we help a customer on their Xbox 360 and learn about the PS3. The news is that the PS3 is still above 300K PSN accounts, according to Sony's official site. We also find out just how bad the PS3 has gotten as far as games goes, with a play for The Last of Us on SCE.com. Then, we review the PS3 Slim as well as the Xbox 360 Slim that was released earlier this year. If the PS3 and Xbox are able to convince you that they are the better choice, be sure to check out the Gold Edition of Gran Turismo and Gran Turismo 5. Last but not least, the Nintendo Wii U may be losing ground, but is still selling well. Show support for the Internets, and get to know the people you listen to through T-Shirts, Shirts, and Apparel. In the past too, the apex court has dismissed the plea seeking a probe by a special CBI judge. The court had in July last year rejected an application by former Prime Minister Manmohan Singh to set aside the CBI order and that it be allowed to approach the Solicitor General to get the decision quashed. Vajpayee was seen to be in the loop when the corruption scam occurred. Allegations against Tytler include allegations that he was involved in extorting money for a law to build a temple at the birthplace of Lord Krishna. The case is linked to the Janata Party scam, wherein several Congress leaders have fled the country, resulting in no-show cases and it is being heard under the money laundering provisions of the PMLA. Tytler, a lawyer, is now in Tihar jail after being convicted in the case by a trial court. He was also convicted by a CBI court in Ahmed
