Teamscale is a feature-rich and sophisticated piece of software designed from the ground up for one thing: to improve the quality of your code. It does so with the help of its specialized tools that point out where the quality of the code is not up to par by revealing redundant parts, unwanted dependencies, and potential programming errors, as well as by offering very good integration with some of the best analysis tools and IDEs out there, for a broad range of programming languages. It requires that you place the license file in a particular location before you can launch the app. In order to get started with, you will first need to request a valid trial or a full license file, sent to you via email. This said, before anything make sure that you place the 'teamscale.license' file directly into the teamscale directory, within the original package. Considering that Java is already present on your computer's system, you can start Teamscale by double-clicking the Teamscale.bat executable file. You should be greeted by a command-line window that notifies you that the service has started and the default port number. Easy to log in, a bit more complicated to actually get started. Next, open your web browser, type in the following address " " and log in using your official credentials or the generic 'admin/admin' for both username and password, for evaluation purposes. Once logged in, you are greeted by a utility's streamlined interface that makes it very simple for you to access almost all the main features directly from the top toolbar. Evidently, to get started, you are required to create a new project by choosing a name, an analysis profile, a template for the initial dashboard and by adding information about a source code repository and an issue tracker. To make things even better, if you opt for the license evaluation, Teamscale may offer you the chance to try the app for a maximum of 3 days, within a particular period of time by paying a subscription fee. As you can see, Teamscale comes with all the necessary features and a very solid and intuitive infrastructure. Such an approach makes it the ideal tool for professional developers and project managers looking to get the best out of their code. Get the tools and resources that you need to make your project shine. Product Manager We have a very diverse set of reviews so we can provide a project with the tools and resources that you need. We only use the best software products and provide the best services.

#### What's New in the Teamscale?

- Instant detection of clone-like code patterns - Searches for library imports - Edits duplicate code, accumulates statistics - Built-in Diff/Merge and Version Control Integration - Code Linting and Refactoring based on inspections - Find's indirect dependencies - Prints redundant code, naming and type enforcement - Detects clones - Supports official or custom templates - Built-in Git and Subversion - supports SVN/TFS/CVS/Git - supports SVN/TFS/Git/GitHub - supports JIRA/JBug/Redmine/Bugsnag/GitHub/Microsoft Team Foundation Server - Supports Python, Ruby, Java, C, C++, C#, Java, JavaScript, VB, PHP, Perl and more. Teamscale Changelog v9.4: - Fixed compatibility with Microsoft TFS - Fixed issue related to live analysis (i.e. hotspots, visitgraph, code linting, code annotations) - Fixed issue related to the same problem in visitgraph and code annotations - Fixed issue related to merge tool - Fixed issue related to Hotspot codes line on hover, when save value is changed and new profile is created - Fixed issue related to system mappings - Fixed issue related to unattended build / version control / number of changes on dashboard - Fixed issue related to Python version 1.5.2 - Fixed issue related to "search parameters" tab - Fixed issue related to language selector - Fixed issue related to language selector in report generation - Fixed issue related to custom template creation - Fixed issue related to enter name of report file - Fixed issue related to deprecated methods in report generation - Fixed issue related to live analysis on hotspots (was broken) - Fixed issue related to live analysis on visit graph (was broken) - Fixed issue related to viewgraph (was not deployed) - Fixed issue related to Live analysis in code annotations (was broken) - Fixed issue related to outdated source code format on dashboard - Fixed issue related to code annotations - Fixed issue related to hotspots - Fixed issue related to Ondelog - Fixed issue related to Ondelog viewer - Fixed issue related to list of words and their variants - Fixed issue related to code annotations - Fixed issue related to category widgets - Fixed issue related to the "N
