In the past, the fuel for aircraft engines has been provided in tanks usually located in the wing or the fuselage. However, in recent years, the practice has become more common to carry a portion of the fuel in the fuselage and to store the balance of the fuel in tanks in the wings or empennage. Consequently, there has developed a need for providing connection between the fuel tanks in the fuselage and the tanks in the wings and/or empennage to assure that sufficient fuel can be transferred from one tank to the other when required. A typical connection between a tank in the fuselage and a tank in the wing is shown in U.S. Pat. No. 3,474,688. This patent shows a plate or panel having holes in its outer surface and extending through the plate at spaced locations from its top to its bottom. The holes are placed in the plate so that they are spaced equally from each other. The holes allow the plate to be slidably inserted into the wing tank to effectuate fluid transfer. A principal shortcoming of this arrangement is that the holes in the wings have the tendency to allow foreign matter to enter the wings and it is believed that all such foreign matter will eventually be found in the engine. An obvious solution to the problem of allowing foreign matter into the engine would be to provide the holes in the walls of the wing tank larger than the hole in the top plate; however, this creates an undesirable problem. The holes in the wing tank are provided in predetermined locations. The holes are made through the tank wall so that the outside surface of the tank wall is smooth and continuous. Thus, a rapid and strong bond may be formed between the plate and the tank wall if the holes are in direct contact. The bond, however, is not strong enough to retain the plate if it is designed to be larger than the hole in the tank wall. Consequently, a welding operation is required. Thus, a substantial number of man hours are required for setting up the holes in the wing tank and welding the plate to the wing tank. It is also possible to use screws in lieu of welding for joining the plate to the tank wall. However, it is necessary to pre-drill the holes in the tank wall to accommodate the screws. This is obviously undesirable in that additional time and expense are required. A need thus exists for a quick and easy method of connecting the plate of the top of the wing tank and the tank wall of the wing tank.Q

ring is heavy and substantial. It also features a solitaire diamond center stone that weighs in at a delightful 1.42 carats. I purchased this ring for a special occasion for myself. It is very different from other rings I have ordered, and I liked that it came in a velvet pouch instead of a box. I ordered a custom solitaire in rose gold to go with it. It is beautiful, and I am happy with the purchase. I was looking for a ring with a solitaire in it to celebrate my new marriage. However, this is not a ring I wanted to spend a lot of money on. This was a present for my brother and I knew that the solitaire would be not only perfect but also a beautiful one at that. He absolutely loved it, and we are looking forward to wearing it forever.
