To learn more about Photoshop basics, take a look at Book I, Chapter 5. You can read more about Photoshop's advanced features in Book I, Chapter 6. Lightroom Lightroom is Adobe's new photo-management program that came out in the fall of 2013. Lightroom has a new look and workflow built from the ground up. It is a cross between Bridge, the company's previous image-management program, and Photoshop. Some users have called Lightroom the new Photoshop. It has the full Photoshop image-editing features, but it is a bit more streamlined for creating and managing images. The best feature of Lightroom is its user interface. It feels intuitive and similar to using a digital camera. It has a design that makes it easy to use for new photographers and advanced users alike. I talk more about the differences in the sections that follow. Using Lightroom The main screen in Lightroom is called the Library. You access the Library by selecting it from the top left of the screen, as shown in Figure 2-1. The Library has a navigation ribbon at the top. FIGURE 2-1: The Library is your home base for managing your images. In the Library, you manage images that you've imported into Lightroom. You can create new images, add adjustments, and perform other image-related tasks. You can also share images on Lightroom's Web site and select to sync the images to your computer. Note that some of the terms for files in this book are Lightroom and Photoshop terms. This is not intended to be confusing. If you're a person who's using the Photoshop program, just remember that the terms you use to identify files in Lightroom are the same as they are in Photoshop. Importing photos into Lightroom Just as you have to import photos into Photoshop, you have to import images into Lightroom. You can use both the Adobe Camera Raw Converter and Photoshop's own import feature for importing images. The process of importing an image into Lightroom works the same way whether you import it from a computer, camera, or scanner. You select one of the methods that works best for your photos. Figure 2-2 shows the Import dialog box. FIGURE 2-2: You import images into Lightroom by choosing your method of image collection. Image files are organized in a Library folder. You can select any image in the folder by clicking

Q: Word count, find word in a array and increase by 1 Hey so I've been trying to make a small tic tac toe game, but the issue I'm running into is getting the user input to be a string to match a word in an array. Right now it is a simple for loop that reads the input from the keyboard, but it is a loop that reads input a character at a time. How can I allow the user to enter the word to match? main() { int inputWord = 0; int table[9][3] = { {0, 0, 0}, {0, 0, 0}, {0, 0, 0}, {0, 0, 0}, {0, 0, 0}, {0, 0, 0}, {0, 0, 0}, {0, 0, 0}, {0, 0, 0} }; int count = 0; int i = 0; // Start the loop while (inputWord!= 9) { // Ask the player to enter a word printf("Please enter a word: "); // read the input from the keyboard, but char by char instead of whole word for (i = 0; i
