Free Download!Q: Updating the entire set of files
in ASP.net I have a requirement to update the
content of a set of files. The content of these files
comes from a database, but the content is the
same for every file. So basically I want to update
the contents of all the files. What is the best way
to do this? This is a asp.net application. I was
looking into using OutofProc and changing the
web.config file that is currently the out of proc
process. Is there a better way to do this? I was
also thinking about xml somehow, I'm not sure if
this is possible. Any pointers in the right direction
would be much appreciated. A: You can do it by
change content of just one file using WebDAV or
REST API. For WebDAV you will need to edit
Web.Config to make it work. I have done that for
my application and it worked. ." generated with
