The Lock function prevents accidental changes to certain layer attributes. The Eraser allows you to erase pixels of one color or one number of pixels. The Pencil Tool is used for drawing. It adds vectors to an image, allowing you to easily change the width of an image line, add distortion effects, and create various effects with multiple colors. The Sponge Tool is used for more localized changes. It can erase pixels, using a sponge-like effect on the canvas. Photoshop comes with a multitude of features, fonts, effects, and brush or pen tools. Here are some of the most common ones: Let's take the Pencil Tool for instance. It has a variety of uses, but most people start with using it to draw lines and shapes. Photoshop will let you draw any shape you want, and you can erase lines and convert shapes into various types of lines. For instance, you can use the Pencil Tool to draw out all the water in an image, then erase it to create a serene landscape. The Pen Tool allows you to draw straight lines at any angle, creating long or short lines. You can also quickly transform straight lines into curves, such as 90°, 45°, and 180° angles. For instance, you might use the Pen Tool to sketch out the outline of an object on a piece of paper. The lines you draw will create the shape of the object. While the Pen Tool creates lines and curves, the Paint Bucket Tool lets you fill in areas of the image with a solid color. You'll most likely use the Pencil or Brush Tool to paint with a variety of colors. For instance, you might use a Pencil Tool to sketch out a rose on a piece of paper. You might then use the Paint Bucket Tool to select the specific area of the image that you want to be filled with a color, and then paint. With the Brush Tool, you can use a variety of brush sizes, shapes and positions to create unique brushstrokes and styles. You can also save brushes as a preset for quick use. A Brush Preset is a set of brushes that can be stored in the Photoshop Application Switcher. Once you have a set of brushes you like, you can press the Option/Alt button, and then select the name of the brush preset you want to use. You can save and recall brushes with unique names. You can

Amazon has a reason for its recent \$50 million deal with Ring — the company is ready to invest \$300 million in improving the facial recognition algorithms used by its products. Lawmakers on both sides of the political aisle are sounding the alarm about this collection of powerful technologies, particularly in light of Amazon's social media monopoly. The tech giant's facial recognition tools are "not generally highly reliable," Sen. Al Franken (D-Minn.), a lead investigator of the Senate's Subcommittee on Privacy, Technology and the Law, told Recode. A batch of facial recognition misfires by Amazon's Rekognition product in December exposed the imperfections of Amazon's technology — in the absence of independent review, that suggests the errors may be common, he said. The lack of standard protocols makes it all the more critical that Amazon is building these capabilities into its products, he said. "The group I'm leading is going to ensure that when we look at this technology, we make sure that no company has a monopoly on it," Franken told Recode's Kara Swisher in an exclusive interview. The bipartisan concern over the

hardware and software, which perform on-device or on-network facial recognition, will be a big topic at this year's hearing next month of the Senate Intelligence Committee. Sen. Mark Warner (D-Va.), the committee's vice chairman, plans to propose legislation requiring tech companies to have independent privacy engineers review products that use facial recognition. "It is so important that we have independent, third-party review to ensure that these algorithms are as accurate as possible," Franken said. While Amazon's technology has gotten most of the attention over the past year, facial recognition technology has also rolled out at a record rate. Amazon Rekognition. (Image: Amazon) Earlier this month, Amazon brought out its Rekognition product, which consists of an API that uses facial recognition to identify people in photos and videos and other images. "It is taking the biggest steps toward making facial recognition mainstream," said Jason Schultz, a fellow at the New America Foundation, a Washington think tank that specializes in technology and public policy. It's too early to know the accuracy of the facial recognition product, but it's already clear that Amazon's
