Basic Principles of Photoshop Layers Photoshop layers are used to organize images. You can use them to turn images into multiple layers and then add or change many pieces on an image at once. You can also add, change, or take away elements within layers. To add new layers, press CTRL+J. To change the layer's opacity or make elements transparent or invisible, change the _Opacity_ property. The ability to easily change elements within layers (changing its _Blend_, or _opacity_), this is where lay

Adobe Photoshop is a widely used photo editing software. It can be used for both simple and advanced image editing tasks. It contains a wide range of features for photo retouching, including photo adjustments, cropping, straightening, red-eye removal, dodging and burning, color correction, and many others. The main competitors of Adobe Photoshop include GIMP, Pixlr, and Lightroom. Photoshop Elements is also widely used in place of Adobe Photoshop. Read More: 25 Best Design Software for Windows Adobe Photoshop Features When most people think of Photoshop, they think of the most commonly used features. These are split into four main categories. The first category of features is workspace editing. This includes features such as layer tools, filers, and image adjustments. The next category is selections. This includes features such as blurs and brushes. The next category is 3D. This includes features such as the 3D warp tool, the 3D transform tool, and the 3D effects. The final category is filters. This includes features such as the Gaussian blur filter. The following article provides a summary of Photoshop's most commonly used features. If you don't have a copy of Photoshop, it is available on the Adobe website for free. Adobe Photoshop for Windows The Photoshop program is available for both PC and Mac. Most users can perform all the features with their choice of Photoshop. But to take full advantage of Photoshop, you need to have the same version of Photoshop on your computer as the rest of your photos. You also need to import the photos from the computer. If you don't need a Mac version, Photoshop can be installed on a Windows computer using the PSD media files. However, you may have trouble importing your pictures and opening your files. Adobe Photoshop Features The following list displays the features of Photoshop. Workspace Editing The first thing that most users do with Photoshop is to rearrange the workspace. To do this, navigate to Window > Workspace or press Ctrl+Tab. You will be presented with a list of all the workspaces. There are also six default workspaces, displayed at the bottom of the list. Click the workspace you want to use. It will be renamed to the workspace you selected. If there are no other workspaces, you will be presented with a three row list of 05a79cecff

Q: Converting a method into a lambda expression I have code that is working but I want to convert the method into a lambda expression, is there a way to do this? public void AddToReport(string area, string campaign, string report) { report = FormatPercentage(area, campaign, report); } public string FormatPercentage(string area, string campaign, string report) { return String.Format("{0} {1} ({2}%", area, campaign, report); } A: I think you want something like this: public string FormatPercentage(string area, string campaign, string report) { return String.Format("{0} {1} ({2}%", area, campaign, report); } // method remains the same public void AddToReport(string area, string campaign, string report) { // C#6 report = String.Format(report,area,campaign,FormatPercentage(area, campaign, report)); } A: You can't use a lambda in this case. A lambda can't return a value because it can't be assigned to. You could use an anonymous function instead though - your existing method is very much like a delegate: report = ((value, area, campaign, report) => String.Format("{0} {1} ({2}%", area, campaign, report))(report, area, campaign); If you don't want to have a lambda, then you need to create a new method that returns an object with the property you want: public string FormatPercentage(string area, string campaign, string report) { return String.Format("{0} {1} ({2}%", area, campaign, report); } public string AddToReport(string area, string campaign, string report) { report = String.Format("{0} {1} ({2}%", area, campaign, FormatPercentage(area, campaign, report)); } By doing this you are now referring to the property in the new method instead of the method, and that means you can assign the result to

Q: How to append elements to a list using javascript.map() function? I have to make a list with two elements and then append those elements to the current list using javascript map function. But I get the below result. I don't know why. var list1=[2,3]; var list2=['a','b']; var x=list1.map(function(e){ console.log(e); return list2.map(function(e){ console.log(e); return e + '_'+e; }); }); console.log(x); //should be list2 - [a, b, a_b] A: list1.map isn't mutating list1. It makes a new array. So you have to return the array, instead of modifying the elements: var x = list1.map(function(e) { var output = []; for (var i = 0; i Show HN: A redesigned eDesigner, now free - rleihaus ====== rleihaus Just so you know, this is the project we took to the next level after [
